

Electrical Compliance Inspection

An Electrical Compliance Inspection is an ideal service for small to medium companies. This straightforward inspection includes a review of the written electrical safety program and a facility walk-through by one of our professional team members to evaluate PPE, workplace practices and equipment conditions.

The on-site inspection helps personnel focus on important areas in need of improvement to maintain compliance with OSHA and NFPA 70E requirements.

What to Expect

The Electrical Compliance Inspection will be done in conjunction with a training course. One of our professional team members will visit your facility the day before the scheduled training to meet with key personnel and do a walk-through to evaluate current workplace policies and procedures. The information gathered will be used to maximize the benefits of the training and provide direction for your safety improvement process.

1 WEEK IN ADVANCE Submit for reference and review:

- Company/Site Electrical Safety Program
- Lockout/Tagout Procedures
- Switch Procedures
- Energized Electrical Work Permit Policies

SITE VISIT

During the site visit, an e-Hazard electrical safety expert will:

- Evaluate electrical safety PPE
- Observe electrical safety practices
- Conduct limited interviews with electrical workers
- Take photos, if requested

Information gathered from the inspection will be used to discuss specific safety areas for focus during training.

OUTCOMES

The e-Hazard electrical safety expert will deliver a customized e-Hazard training presentation emphasizing key areas identified for improvement.

A brief written summary will be provided, identifying areas addressed in training and any additional opportunities to increase electrical safety compliance.
